Steve,

I hope I am not flooding you with unnecessary emails. Our lab at Ft. Meade is looking at this method, but perhaps you know someone else in Cinc. that could as well? The contact below is the only one I have related to response efforts in WV, so you might want to start with him for input to your other questions related to their use of GAC, etc. He may be able to put you in touch with the appropriate person. We pretty much have had to go through the state.

If you mention Ex. 6 - Personal Privacy it might get your foot in the door. And I do not mind you working directly since I am certain you would be better able to ask followup questions on the spot and therefore obtain better information more quickly.

Patti Kay

NATIONAL WARN NOTICE - WIDE DISTRIBUTION

Many of you have likely seen reporting on the chemical spill in Charleston, WV which has impacted the drinking water for the American Water's treatment and distribution systems.

I received a request from American Water that they are seeking additional mobile lab support that can run samples for decision making support as they begin to take actions to clear the system.

The method and equipment specifications are attached.

Equipment - ThermoFisher GC/MS unit utilizes SM 524. The attached files includes the protocol utilized by Eastman, the chemical producer.

If you have this capability please contact Nick Santillo, American Water, for further details and logistical arrangements.
